**Finding Arc Length**

Sheet 1

Example:

$$\text{Area} = 32.71 \text{ in}^2 \\ s=?$$

$$\text{Area of a sector} = \frac{\theta \times \pi \times r^2}{360^\circ}$$

$$32.71 = \frac{\theta \times 3.14 \times 5 \times 5}{360^\circ}$$

$$\theta = 150^\circ$$

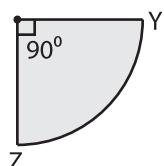

$$\text{Length of the arc AB} = \frac{\theta \times \pi \times r}{180^\circ}$$

$$= \frac{150^\circ \times 3.14 \times 5}{180^\circ}$$

$$= 13.08 \text{ in}$$

Find the arc length for each sector. Round the answer to two decimal places. ( use  $\pi=3.14$  )

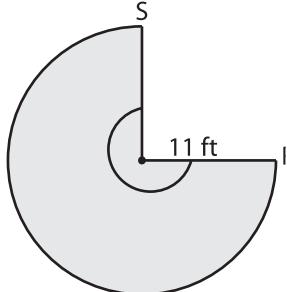

- 1) 2) 3)

$$\text{Area} = 153.86 \text{ ft}^2$$

$$\text{Length of the arc YZ} = \underline{\hspace{2cm}}$$

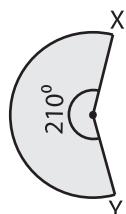

- 4)

$$\text{Area} = 284.96 \text{ ft}^2$$

$$\text{Length of the arc RS} = \underline{\hspace{2cm}}$$

- 7)

$$\text{Area} = 412.13 \text{ in}^2$$

$$\text{Length of the arc XY} = \underline{\hspace{2cm}}$$
