

One-Step Equations - Fractions & Decimals

Add/Sub: S1

- 1) Selena is baking chocolate chip cookies. The recipe calls for $2\frac{1}{3}$ cups of semi-sweet chocolate chips. If she has already put in $1\frac{1}{2}$ cups into the batter, how many more cups of chocolate chips should be added to the batter?

- 2) Rose has two baskets; one contains apples and the other contains bananas. Together, the baskets contain 12 fruits. If the apple basket contains 5 fruits, how many fruits are in the basket of bananas, if the apple basket contains 5 fruits?

- 3) A metal manufacturer produces a 6-inch cylindrical rod, after which the rod is shortened by 1.5 inches. How long is the rod after it is shortened?

- 4) Alice has x dollars in her account before she withdraws \$20. If she now has \$30, how much money did she have in her account before she withdrew the money?

- 5) Clara watches a horror movie in a theater. The movie has a running time of $1\frac{2}{3}$ hours. She leaves midway, and misses $\frac{5}{6}$ hours of the movie. How long did Clara watch the movie?
