## Diagonal of a Rectangle

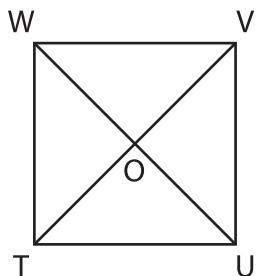

Sheet 1

Solve for  $x$  and then find the length of the diagonal.

1)

2)

$$OP = (67 + 10x) \text{ in} ; OQ = (-4x - 3) \text{ in}$$

$$TV = (2x - 2) \text{ ft} ; OU = (-3x + 47) \text{ ft}$$

$$x = \underline{\hspace{2cm}}$$

$$\text{diagonal} = \underline{\hspace{2cm}}$$

3)

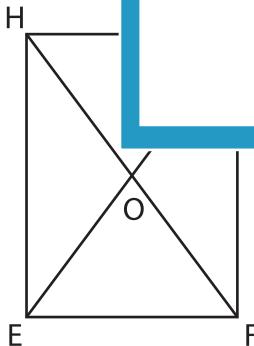

$$JL = (-9x) \text{ ft} ; KM = \underline{\hspace{2cm}}$$

$$x = \underline{\hspace{2cm}}$$

$$\text{diagonal} = \underline{\hspace{2cm}}$$

5)

$$OH = (55 - 8x) \text{ yd} ; OG = (3x) \text{ yd}$$

$$x = \underline{\hspace{2cm}}$$

$$\text{diagonal} = \underline{\hspace{2cm}}$$
