

Rounding Improper Fraction

Example: Round $\frac{8}{3}$ to the nearest whole number.

Step 1: Convert improper fraction into mixed number.

$$\frac{8}{3} = 2\frac{2}{3}$$

Step 2: Look at the fraction part of the mixed number. If the fraction is greater than or equal to $\frac{1}{2}$, round up to the nearest whole number. If the fraction is less than $\frac{1}{2}$, round down to the nearest whole number.

$\frac{2}{3}$ is greater than $\frac{1}{2}$, so we round up to the next whole number, which is one.

$2\frac{2}{3}$ rounds to 3.
