

# Symbiotic Relationships

Mutualism

## Flowers and Bees

Bees collect nectar to make honey by traveling from flower to flower.

They also carry pollens from one plant to another, resulting in pollination.

Hence, both bees and flowers are mutually

## Cattle Egret

The cattle stir the insects which are scooped up

The cattle egret is benefited while the cattle remain unaffected

Commensalism

## and Humans

Mosquitoes feed on human blood to help care for their eggs.

The saliva of the mosquito enters the human body in the process.

The mosquito benefits from the relationship while the human is exposed to many dreadful diseases.

Parasitism
