

# Area of an Isosceles Triangle

Example:

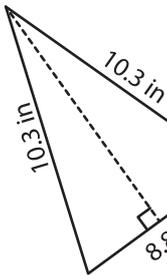

**In an isosceles triangle, altitude drawn to the base is a median.  
Median divides base into equal line segments.**

$$\begin{aligned} \text{height} &= \sqrt{6.3^2 - 1.6^2} \\ &= \sqrt{39.69 - 2.56} \\ &= \sqrt{37.13} \text{ yd} \end{aligned}$$

$$\begin{aligned} b &= 3.2 \text{ yd}, h = \sqrt{37.13} \text{ yd} \\ \text{Area} &= \frac{1}{2} \times b \times h \\ &= \frac{1}{2} \times 3.2 \times \sqrt{37.13} \\ &= \mathbf{9.75 \text{ yd}^2} \end{aligned}$$

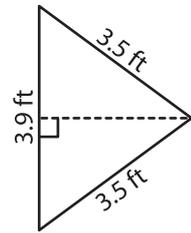

Find the area of each isosceles triangle. Round your answer to two decimal places.

1)

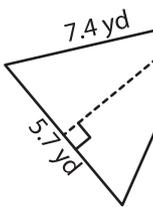

Area =

2)

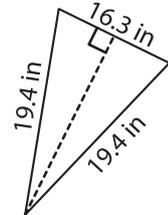

Area =

4)

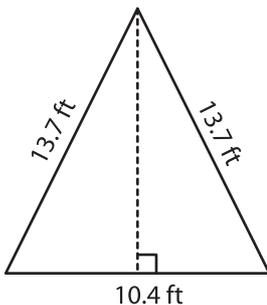

Area =

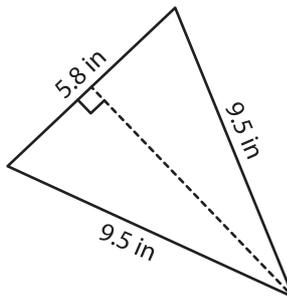

Area =

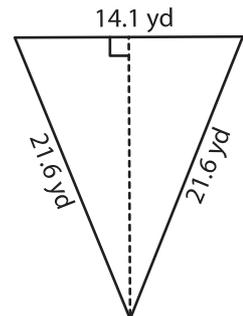

7)
